

Xharon

Sculpting with light

Xharon is a projector developed to meet lighting requirements of flexibility in specific environments such as museums, art galleries and commercial spaces. The key feature of this fitting is to achieve quality in technical lighting through high efficiency, optimum glare control and balanced beam angles. The movement of the cylindrical luminaire head and the separation between head and housing define the design of Xharon. The diversity of available accessories makes it possible to sculpt and enhance architectural spaces.

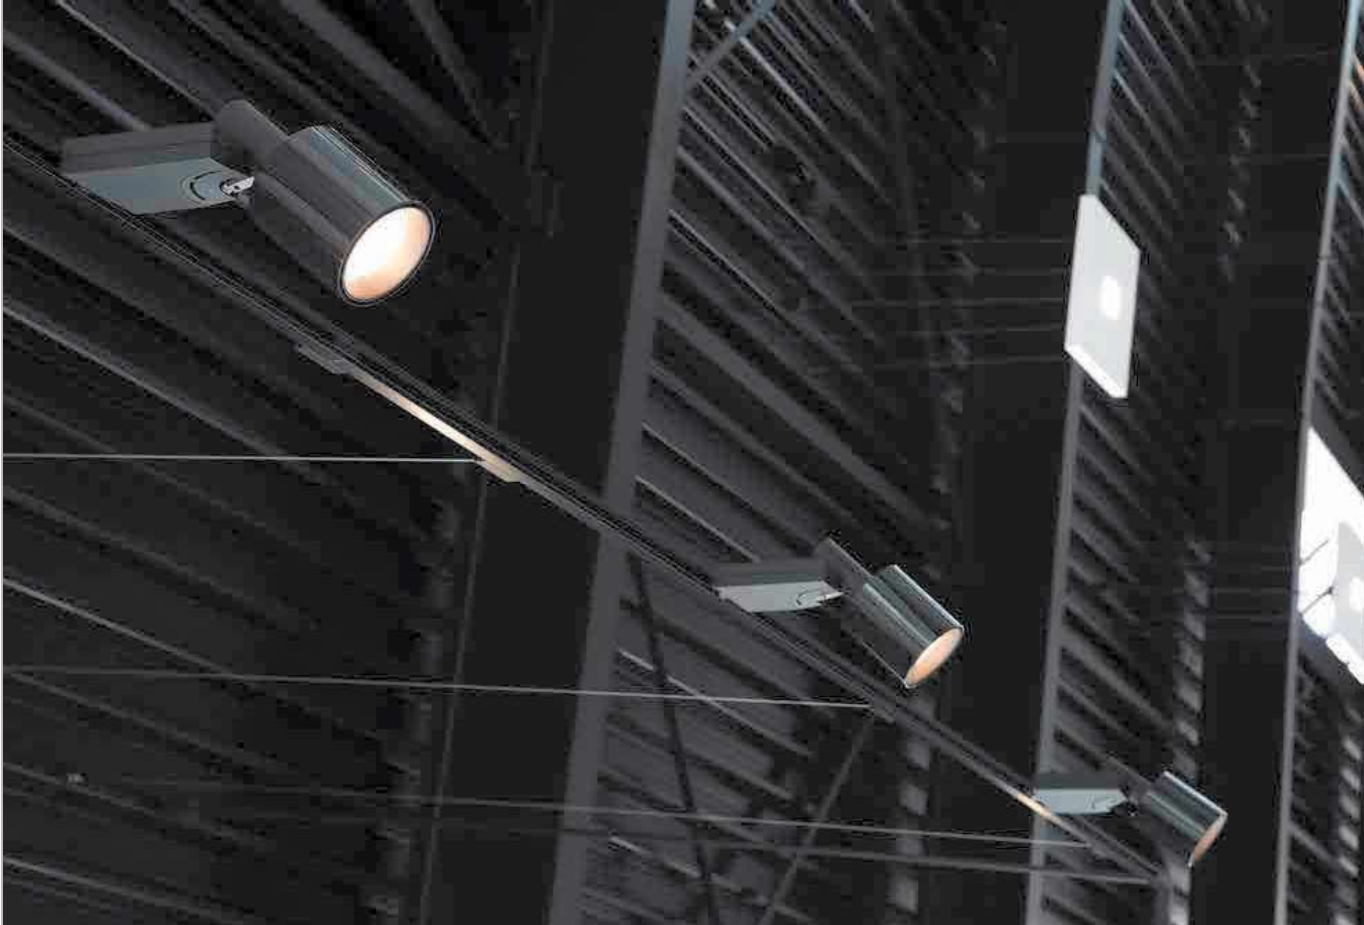

White Xharon on-Track T4.5 CMH

Black Xharon on-Track T4 bi-pin with diffusing lens

Xharon on-Track offers the opportunity to modify light settings quick and easy. Due to its extensive range of possible adjustments, this luminaire is suitable in spaces that need flexibility, such as galleries and commercial spaces. Xharon on-Track needs to be mounted on 2-circuit Eutrac tracks.
