vektron ceiling solutions

specification sheet

product name		vektron clip-in ceiling system
vektron quality standard		<p>vektron metal ceilings are manufactured to the highest international quality standards and must be installed, maintained and cleaned in accordance to our Operation and maintenance manual.</p> <p>vektron metal ceilings can be expected to remain durable for over 30 years.</p> <p>All vektron ceiling systems comply with the standard EN 13964.</p>
vektron tiles		vektron tiles are manufactured from hot-dipped galvanised steel with a variety of perforations and colours. vektron ceiling tiles are clipped into a concealed suspension system, in accordance with European and TAIM standards.
tile specifications		
material		0,5-0,7 mm hot-dipped galvanised steel with a minimum zinc coating of 50 g/m ² .
size		vektron clip-in standard tile size: 600 x 600mm cassette panels.
		Other sizes are available on request and are manufactured with a thickness depending on the dimensions of the vektron tile.
edge		vektron clip-in tiles have a shadow gap of 3mm wide and 8mm high, on every side of the tile.
perforation pattern		The standard perforation has a hole diameter of 2.5mm with a square pitch and an open area of 16.5%. Other perforations are available. (see annex A). Custom perforations on request.
finish		Electrostatically applied polyester powder coating with a paint thickness of minimum 60µm.
colour		8 standard colours available (see annex B) Other RAL colours on request.
gloss rate		≤5% - ≤20% depending on colour. (see annex B)
light reflection		>80%
access to ceiling void		All ceiling panels are removable with access tool.
suspension system		Components are manufactured from cold rolled, bended or punched galvanised steel.
clip-in carrier		The clip-in carriers are roll formed double-walled T-shaped profiles (H 25mm x flange width 18mm) out of 0,5mm hot-dipped galvanised steel (DX51D+Z140MA), used as primary and secondary profile. Primary clip-in carrier to be suspended from structural load-bearing ceiling with lower part support hanger. Secondary clip-in carriers are identical to the primary.
carrier splice		Carrier splice made of galvanised steel for connection of clip-in carriers.
support hanger		Hanger made out of galvanised steel with variable system for wire hooks diameter 4mm.
nonius hanger & locking clip		Hanger made of galvanised steel and fully perforated for suspension of ceiling systems. The upper and lower part nonius hanger are connected with a clip, made of galvanised steel.
cross connector		Cross connector made of galvanised steel for connection of primary and secondary clip-in carriers. Available in 2 sizes: H0 = 0mm between carriers H25 = 25mm between carriers

product name	vektron clip-in ceiling system					
edge finishing	<p>vektron ceiling solutions offers several perimeter solutions to finish edges and hide underlying structures.</p> <p>Surface mounted to the wall</p> <ul style="list-style-type: none">c-wallw-walll-wall <p>Connecting ceiling system with gypsum ceiling</p> <ul style="list-style-type: none">edge cover L-connectionedge cover plaster <p>Finish for floating ceilings</p> <ul style="list-style-type: none">edge cover 20edge cover 80					
bulkhead	<p>Bulkhead panels create an elegant transition between two ceiling levels. Tiles are clipped into the same profiles ensuring a rigid construction to the ceiling transition and can be tailored to specified depths.</p>					
luminaries and integrated techniques	<p>The metal ceiling system is compatible with multiple vektron luminaires, vektron integrated techniques and other luminaries and techniques.</p>					
acoustics						
sound absorption	<p>Perforated cassette panels fitted with acoustic soundtex can achieve a sound absorption ratio of $\alpha_w = 0,5-0,9$ (DIN EN ISO 11 654) measured in accordance with DIN EN 20 354 (ISO 354).</p> <p>Perforated cassette panels fitted with acoustic soundtex and extra mineral wool (35cm; 35kg/m³) can achieve a sound absorption ratio of $\alpha_w = 0,95$ (DIN EN ISO 11 654) measured in accordance with DIN EN 20 354 (ISO 354)</p>

vektron ceiling solutions

specification sheet

product name	vektron clip-in ceiling system
longitudinal sound reduction	Max. longitudinal sound reduction in accordance with EN ISO 717-1 for a full perforated tile with backing of 35mm wool (35 kg/m ³) and gypsum board of 9.5mm: $D_{n,c,w}(C;C_{tr}) = 50(-3;-10)$ dB
reaction to fire	Reaction to fire: vektron clip-in ceiling systems are tested in accordance with EN 13501-1 and DIN 4102 part 1, the vektron clip-in ceiling system achieves the class A2-s2,d0.
manufacturing tolerances	vektron cassette panels and all corresponding subconstruction parts are manufactured in accordance with international quality standard for metal ceilings TAIM (Technical Association of Industrial Metal Ceiling Manufacturers) and EN 13964.
installation & maintenance	The installation and maintenance has to be executed in accordance with the Operation and maintenance manual .
