# vektron ceiling solutions specification sheet

<b>product name</b>	<b>vektron rytmi ceiling system</b>
<b>vektron quality standard</b>	<p>vektron metal ceilings are manufactured to the highest international quality standards and must be installed, maintained and cleaned in accordance to our <b>Operation and maintenance manual</b>.</p> <p>vektron metal ceilings can be expected to remain durable for over 30 years.</p> <p>All vektron ceiling systems comply with the standard EN 13964.</p>
<b>vektron tiles</b>	vektron tiles are manufactured from hot-dipped galvanised steel with a variety of perforations and colours. vektron ceiling tiles are clipped into a concealed suspension system, in accordance with European and TAIM standards.
<b>tile specifications</b>	<p><b>material</b> 0,5-0,7mm hot-dipped galvanised steel with a minimum zinc coating of 50 g/m<sup>2</sup>.</p> <p><b>size</b> vektron rytmi standard tile width: 98mm cassette panel.</p> <p>Other sizes are available on request and are manufactured with a thickness depending on the dimensions of the vektron tile.</p> <p><b>edge</b> vektron rytmi tiles don't have a shadow gap.</p> <p><b>perforation pattern</b> The standard perforation has a hole diameter of 2.5mm with a square pitch and an open area of 16.5%. Other perforations are available. (see annex A)</p> <p><b>finish</b> Electrostatically applied polyester powder coating with a paint thickness of minimum 60µm.</p> <p><b>colour</b> 8 standard colours available. (see annex B) Other RAL colours on request.</p> <p><b>gloss rate</b> ≤5% - ≤20% depending on colour. (see annex B)</p> <p><b>light reflection</b> &gt;80%</p> <p><b>access to ceiling void</b> All tiles to be removable.</p>
<b>lamella</b>	<p><b>material</b> Lamella made of natural or black anodised aluminium, with a thickness of 2mm.</p> <p><b>access to ceiling void</b> All lamellas to be removable.</p> <p><b>suspension</b> With cross connector in clip-in carrier.</p> <p><b>standard installation pitch</b> 100mm (other pitches on demand)</p>
<b>suspension system</b>	<p>Components are manufactured from cold rolled, bended or punched galvanised steel.</p> <p><b>clip-in carrier</b> The clip-in carriers are roll formed double-walled T-shaped profiles (H 25mm x flange width 18mm) out of 0,5mm hot-dipped galvanised steel (DX51D+Z140MA), used as primary profile. Primary clip-in carrier to be suspended from structural load-bearing ceiling with lower part support hanger.</p> <p><b>carrier splice</b> Carrier splice made of galvanised steel for connection of clip-in carriers.</p> <p><b>support hanger</b> Hanger made out of galvanised steel with variable system for wire hooks diameter 4mm.</p> <p><b>nonius hanger &amp; locking clip</b> Hanger made of galvanised steel and fully perforated for suspension of ceiling systems. The upper and lower part nonius hanger are connected with a clip, made of galvanised steel.</p> <p><b>cross connector</b> Cross connector made of galvanised steel for connection of primary and secondary clip-in carriers. Available in 2 sizes: H0 = 0mm between lamella and clip-in carrier H25 = 25mm between lamella and clip-in carrier</p>

# vektron ceiling solutions specification sheet

<b>product name</b>	<b>vektron rytmi ceiling system</b>
<b>luminaries and integrated techniques</b>	The metal ceiling system is compatible with multiple vektron luminaries, vektron integrated techniques and other luminaries and techniques.
<b>reaction to fire</b>	Reaction to fire: vektron rytmi ceiling systems are tested in accordance with DIN 4102 part 1, the vektron rytmi ceiling system achieves the class A2-s2,d0.
<b>manufacturing tolerances</b>	vektron cassette panels and all corresponding subconstruction parts are manufactured in accordance with international quality standard for metal ceilings TAIM (Technical Association of Industrial Metal Ceiling Manufacturers) and EN 13964.
<b>installation &amp; maintenance</b>	The installation and maintenance has to be executed in accordance with the <b>Operation and maintenance manual</b> .
