

kreon nuit

kreon nuit is an elementary designed beam that can be used as a massive line to bring graphical elements into architecture.

kreon profile systems provide the perfect containment for luminaires. A profile system can add character and architectural unity to a space. All kreon profiles are precision engineered and finished to the highest standards and utilise quality components and electronics.

The advanced LED system requires a slim gap of just 10mm to unfold a variety of beam angles. Its basic form draws minimal attention and can easily be used in combination with other kreon tools of light, creating an artistic yet responsible use of light sources in a recessed, surface mounted or suspended installation, making it a highly versatile and performing linear lighting system.

The standard preconfigured lengths bring glare free accent lighting where as made to measure configurations, including corner cuts, offer the specifier maximal application freedom. The ideal kreon tools of light for residential, high end office and edgy hospitality projects.

kreon nuit can be recessed, surface or pendant mounted and can be arranged so that light modules are positioned just where the light is needed. Profiles can be ordered as standard lengths or bespoke to suit project requirements.

3. nuit 1x5 profile
surface mounted, white/black
4. nuit 2x5 profile,
surface mounted, black

kreon luminaires can be arranged and customised to match your vision perfectly.

As well as the standard range, kreon also offers you the option of adapting the systems listed to the dimensions of your project and personalising them in terms of light source, colour and dimensions.

Please contact customer service for further information: usa@kreon.com or +1 (201) 298-44 48.

For this Paris office project kreon nuit LED profiles were equipped with custom corner cuts at various angles to meet the sharpe edged graphics of the floor. kreon nuit makes the overall design come alive in a 3 dimensional architectural experience.

The aim of this Raf Segers project was to provide minimal lighting with maximum effect perfectly in tune with the sleek lines of the house.

The suspended nuit profiles blend perfectly and provide additional emphasis to those lines. To maintain the unity, the nuit profiles were installed at angles to each other to arrive at a compact structure that still provided the desired light level on the landing and stairs.
