

kreon oran

kreon has been known as a designer of architectural lighting since it was founded in 1983. Enlightenment that increases the value of its environment and adds value to it, from inside the architecture. The luminaire is only a detail, and will not claim attention itself, but will let the architecture come into its own. Reducing illumination to its essence, without compromises, kreon is known for that. Products are simple and minimalist forms that enter into a dialogue with the space.

kreon oran takes a different approach, without losing sight of the 3 basic principles, 'unity in design, simplicity in technology and precision in detail'.

kreon oran's design is based on the mathematical and architectural principle of the golden ratio, also known as the plastic constant. The basic shapes that can be derived from the proportions of the number are the building blocks of this line of lighting fixtures. Designing from these balanced proportions and principles means working with spatial components. For kreon, oran claims space and actively demands to be a part of it. The spaciousness of the product is reflected in the proportions, but also in the dimensions and materialization.

The lighting enters the room, and becomes part of it itself.

kreon oran brings a decorative ingredient to the kreon portfolio. This range of luminaires exploit artisan materials such as mouth-blown glass, alabaster and borosilicate glass within pure and precise forms.

The kreon oran collection was not only inspired by architecture. Nature too was a great source of inspiration. With its geometrical patterns, the skeleton of the Venus' flower basket goes hand in hand with kreon's designing process. Venus' flower basket is a sponge, which can be found in the waters surrounding Japan. The shape of the sponge was analysed and transformed into the unique form of oran craft's reflector inside the bulb.

kreon oran craft

The ornamental kreon oran line consists of pendants, ceiling or wall fixtures and free standing luminaires. The luminaires are available in black and white, or in pure materials such as bronze. The mouth-blown bulbs come in two shapes, round or pill-shaped. The pendant is optionally covered by a lampshade.

kreon oran stone

The range of kreon oran stone is characterized by a glow of light that creates a pleasant atmosphere through the translucent mineral material. In addition, the pendant luminaires have a diffused downward beam providing additional light on horizontal surfaces.

kreon oran glass

Borosilicate glass is featured in oran glass collection. This is a high-quality technical glass with good light transmittance characteristics and suitable for reproduction. In the series there are nods to the glassware used in labs. Accents in the glass have been sandblasted to obtain a beautiful diffuse light image.
