2	dimensions																				
																					
3	installation	put the plasterkit in the hole in the ceiling	fix the plasterkit with screws	assembling torque max 20 CN.m.	fix the stoppers, until their blocked against the ceiling																
																					
	installation	fill around perimeter of plasterkit using suitable filler and plaster to hide screws and plasterkit.	minimum filler distance, spread out until zero.																		
				revision date: 14/02/2018	Sheet 1/4																

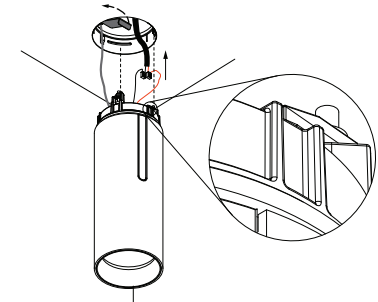

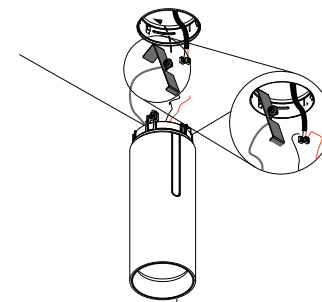

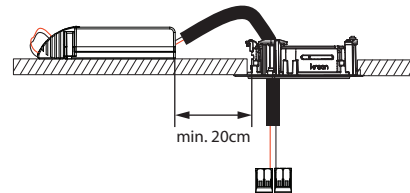

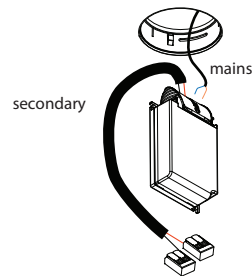

installation

before installation, check if the holes in the cover disc match the screws in the installation disc.

rotate the cover disc counterclockwise until it's blocked and check if the holes match the screws.

mind the polarity of LED!  
+ = red, - = black

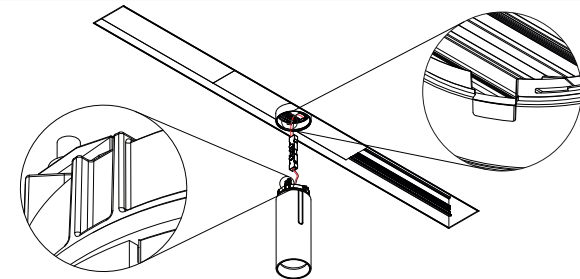

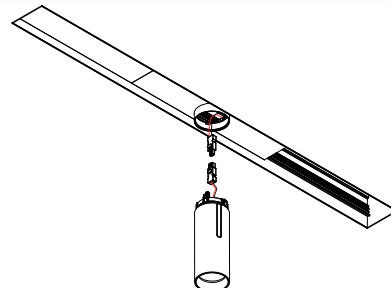

connect the mains voltage to the gear  
use the delivered cable for wiring the secondary connection of the gear (use the open end of the cable)

for installation purposes a fall safety bracket is added.  
in case the holon must be positioned temporarily (e.g. to connect the wiring without having to hold the holon) it can be hanged onto the plasterkit with the hook of the fall safety bracket

connect the red and black wire coming from the fixture to the red and black wire of the delivered cable. (use the connectors) Push the connectors on the ceiling so they do not interfere with further installation of the fixture

push the fall safety bracket through the plasterkit and match the details of the black plastic installation part with the springs of the plasterkit

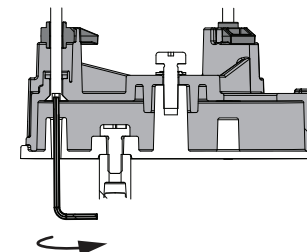

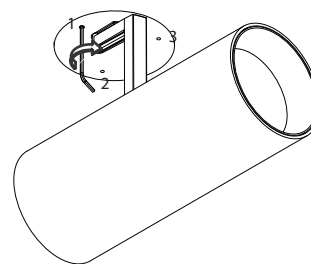

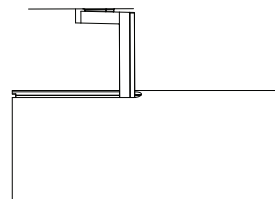

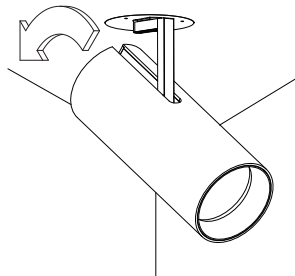

installation

in case of holon 80 directional in-cana: connect male connector to female connector which is already installed in the profile

match the details on the black plastic installation part with the openings inside the round installation ring

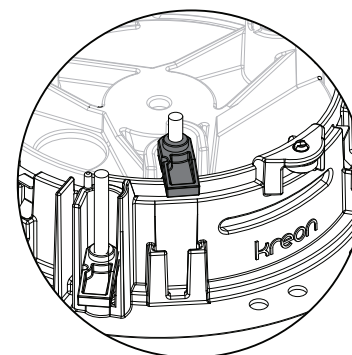

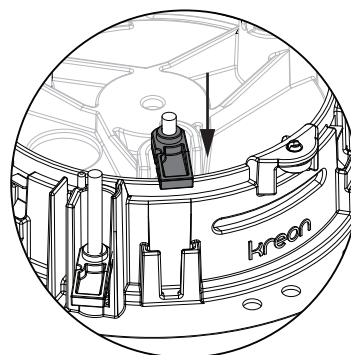

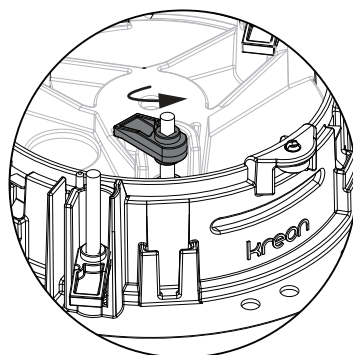

installation

installation

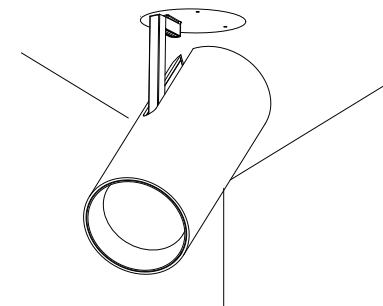

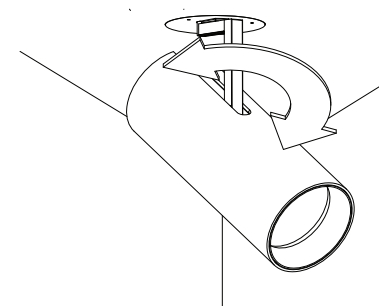

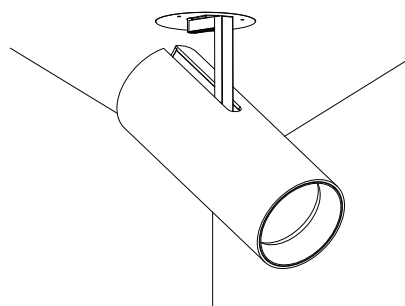

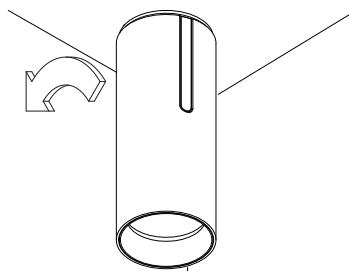

incline the tube by pulling it, to make space to reach the screwholes

fix the fixture by turning the three screws with the hex key

installation

assembly principle

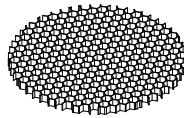

installation

once the holon is completely installed  
it can be inclined in any angle up to 90° by pullin the tube

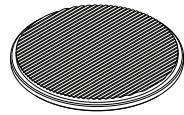

it can also be rotated for 330°

in case of accessories

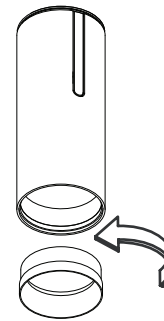

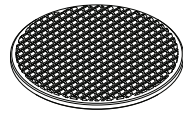

KR726473

KR726100

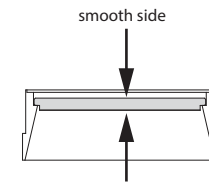

KR726200

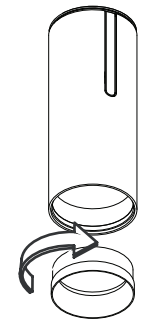

unscrew the louvre in order  
to take it out of the fixture

place the accessory in  
the louvre

smooth side  
structured side  
in case of diffusing/sculpture lens:  
place the structured side downwards

screw the louvre + the accessory  
back in
